PRODUCERS OF HIGH QUALITY SEED

MARETT'S CALHOUN BARLEY

1951 REGISTERED BREEDERS STOCK

CALHOUN BARLEY originated from a cross made by Mr. J. W. Taylor, Senior Agronomist in the Div. of Cereal Crops of the U.S. D.A. Calhoun has had an excellent and enviable record of production. It was developed for combine harvesting on lands of higher fertility and has surpassed all expectations in its ability to stand until after dead ripe. However, unreasonably heavy applications of soluble nitrogen will cause weakness of straw in any of the cereal grains. We recommend shallow seeding at the rate of two (2) bushels per acre. Hot water treatment of our seed prior to multiplication for sales is doing much to control brown loose smut of barley.

DESCRIPTION: Early; short erect heavy stooling plant; very stiff straw; long compact awnless type head, with few short awns.

PRICE: 1-8 Bu. \$4.00 per bu.; 10-40 Bu. \$3.75 per bu.; 40 Bu. up \$3.50 per bu. ▶ 2 Bu. Bags - Ceresan Treated.

MARETT'S CHANCELLOR WHEAT

1951 REGISTERED BREEDERS STOCK

MARETT'S CHANCELLOR is a selection from the Chancellor wheat originated by the Ga. Expt. Stat., Experiment, Ga., in cooperation with the U.S.D.A. Chancellor is adapted to a very wide area, however, best suited to the Piedmont and Mountain Section of the Southeastern States. Experiment Station tests show Chancellor to be a high yielder and indeed an outstanding variety of wheat. It is extremely winter hardy and yet considerably earlier than many less hardy varieties. The straw of Chancellor is sufficiently stiff to insure convenient harvesting with a combine.

DESCRIPTION: Early; very stiff straw; smooth, long, heavy heads; large plump grain; excellent milling quality.

PRICE: 1-8 Bu. \$5.50 per bu.; 10-23 Bu. \$5.25 per bu.; 30-98 Bu. \$5.00 per bu.; ▶ 2 Bu. Bags - Ceresan treated.

MARETT'S ANDERSON OATS

1951 REGISTERED BREEDERS STOCK

ANDERSON OAT'S stiff straw makes it an outstanding combine type of oat. Its range of adaptability is quite extensive, covering most of the Southeastern States, principally the Piedmont Sections of these States. The high type rust resistance inherited from Victoria is assurance against loss from crown or leaf rust. Anderson is consistently a high producer with well filled grains which thrash easily and have a low percentage of hull.

ANDERSON while not highly resistant to victoria blight, or foot rot, is among the more tolerant varieties of Victoria parentage with resistance to crown rust.

DESCRIPTION: Early; medium height; heavy tiller; long heavily fruited heads; good stiff straw; grains are smooth, heavy, plump, and low per cent hull; highly resistant to crown rust, oat mosaic and most races of smut.

PRICE: 1-8 Bu. \$4.00 per bu.; 12-20 Bu. \$3.75 per bu.; 24-40 Bu. \$3.50 per bu.; 44-96 Bu. \$3.25 per bu.; ▶ 4 Bu. Bags - Ceresan Treated.

All prices F.O.B. WESTMINSTER, S. C., are quoted subject to prior sale. We warrant to the extent of the purchase price that any seeds we send out are as described in our advertising and on the labels attached to each package, within recognized tolerances. In all instances our liability is limited to the purchase price of the seed. We waive all responsibility for seed which have been in customer's hand for more than 10 days because there are many factors affecting germination of seeds after storage and after planting, which are quite beyond our control. In no case are we responsible for the crop or germination after planting, whether within 10 days or not. Return seeds at once if not satisfactory.

Our seeds are free from objectionable foreign seeds, such as wild onion, cockle, cheat, etc. All grain is graded and sized and germinates 90% or above. All seed registered with South Carolina Crop Improvement Association.
